## FIRST RELEASE OF THE INFRASTRUCTURE

The aim of this deliverable is to make available to the entire ENPADASI consortium a working prototype infrastructure suitable to be tested (T3.6) and used by early partner adopters across Europe to perform analysis over observational and intervention nutritional studies. The (alphabetical) list of development servers active at M22 is reported in the following table. As they are intended as a pre-final infrastructure, all server addresses (url's) may still change, please check the final release for the definitive locations (Deliverable 3.7.1).

The main contact point for the overall infrastructure is the WP3 leader Rosario Lombardo ([lombardo@cosbi.eu](mailto:lombardo@cosbi.eu)). However local administrative authorities are in charge of administering and granting access to people for the servers they host. For an explanation of the server types see the Deliverable D3.2.1 containing the specification of the infrastructure.
